

Design Floors

High-end seamless floors

EPI Corestone Nature

EPI Corestone Nature is a unique, seamless and robust floor with the appearance of concrete. The seamless floor combines the natural look of concrete with the sturdy qualities of a hard self-lleveling floor: a hassle-free and strong alternative to cement-based flooring. These floors are water-based, contain recyclable resins and a high content of natural raw materials. This floor withstands heavy traffic and has natural slip resistance.

The EPI Corestone Nature is available in exclusive EPI Solid and Blend colours.

EPI Superbase Classic

The EPI Superbase Classic is renowned for its simplicity and aesthetic qualities, serving as the foundation of the Superbase family. This seamless floor is a durable and comfortable polyurethane flooring system based on vegetable oils, such as castor oil, and natural fillers. The cast floor system retains its elastic properties and color stability, even under the influence of UV radiation.

The EPI Superbase Classic is available in unique EPI Solid and Blend colours. The entire colour collection is available on our website: uk.epifloors.com/colours

EPI Superbase Mineral

The Superbase Mineral floor is highly suitable for use in spaces where high comfort and exclusive design are important. The seamless floor creates an optical effect due to the absence of seams. Spaces appear larger and more unified. This tough-elastic floor contains a high percentage of biopolymers and natural mineral fillers. This contributes to a more sustainable world.

The EPI Superbase Mineral is available in elegant EPI Solid and Blend colours.

EPI's Design

In addition to being beautiful and robust, a new floor should also be practical. Our EPI design team is constantly innovating and improving our products, focusing on aspects like stretch-testing and maximizing sound-dampening effects. They also prioritise the durability of the materials used in our floors. We are committed to finding the perfect formula without compromising aesthetics, ensuring every EPI floor complements your home, furniture, and lifestyle.

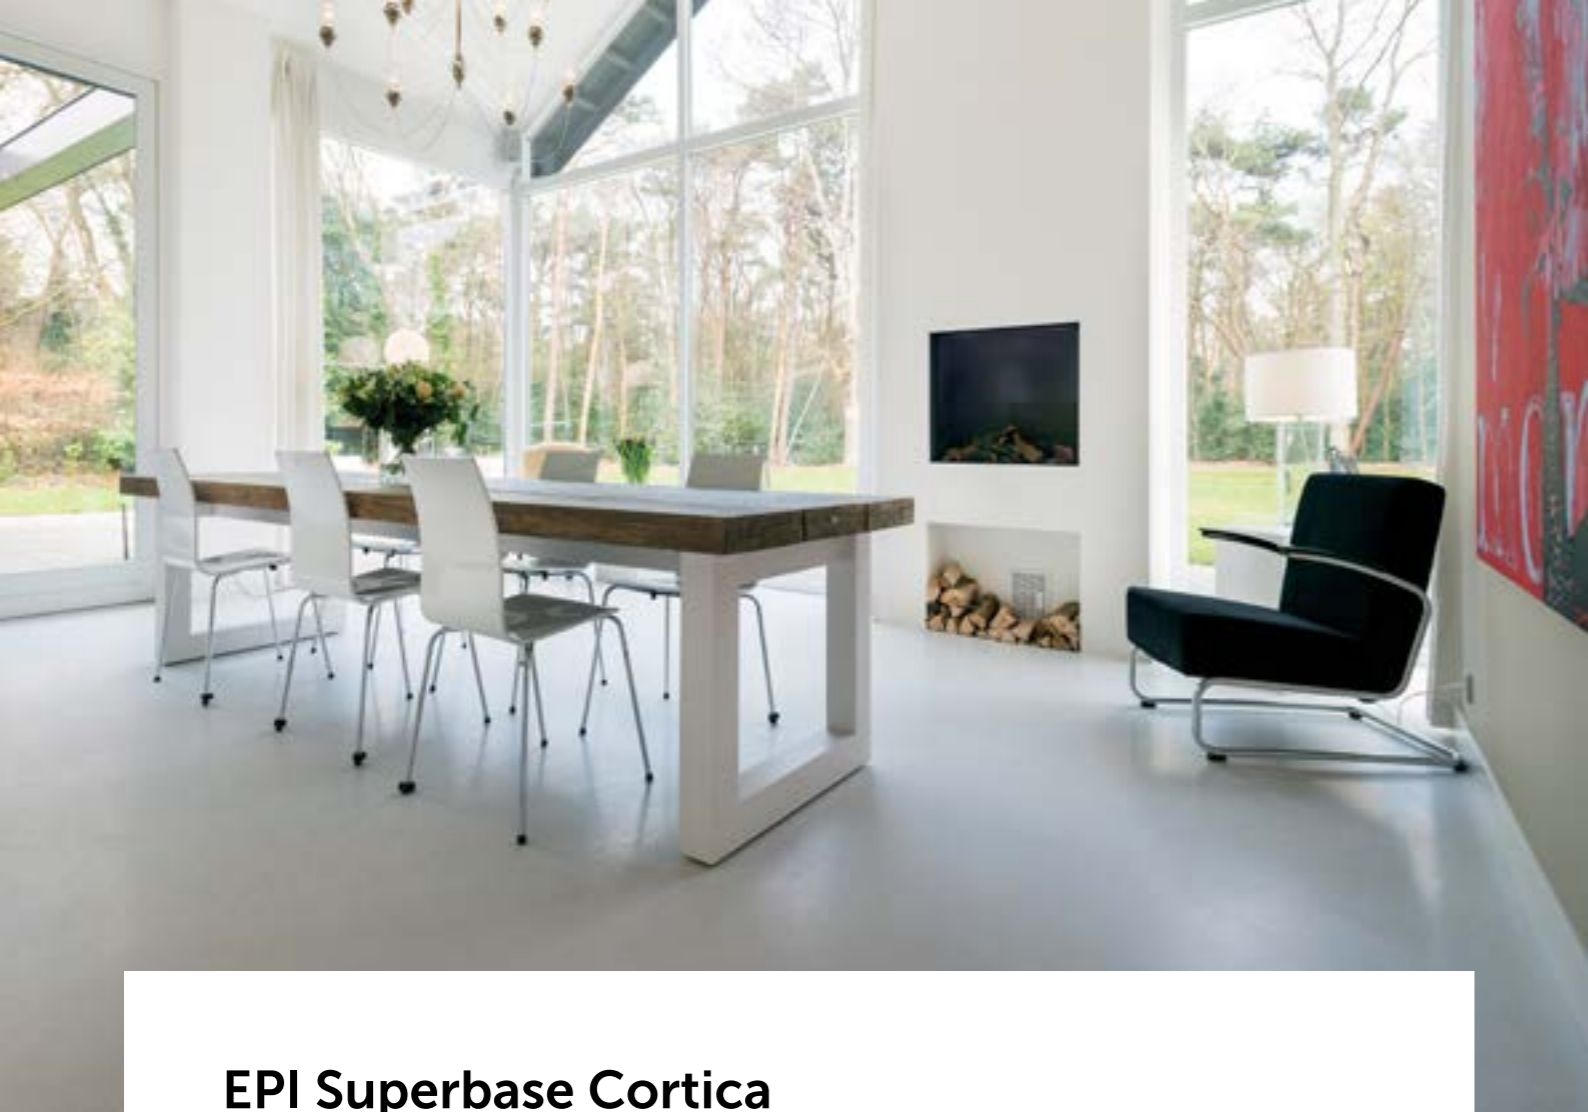

A sustainable choice

As a company, we believe in a happy and healthy future for our colleagues and future generations. We are responsible for producing our products as sustainably as possible, with EPI's products consisting largely of natural ingredients, such as biopolymers. We aim to minimise our carbon footprint on all fronts, leading the way in transparency in the supply chain.

5 Decades of EPI

Since our inception in the 1980s, we have been an authority on seamless floors. Layer by layer, we have built a company that is not only smart and innovative but also sustainable. Our products provide a solid foundation for every aspect of life, from industry to sports, office to home. EPI's floors are already present in more than 75 countries—from Utrecht to Qatar and from the Faroe Islands to Brunei.

From our own factory in Houten, we focus on creating cast floors of the highest quality and providing excellent service—from the first contact to the first step on your new floor. You are more than welcome to experience this for yourself at our Experience Centre.

EPI Superbase Cortica

Superbase Cortica is a seamless floor containing a high content of biopolymers, cork and natural fillers. The seamless floor is a perfect alternative to linoleum sheet flooring. The cork components result in a natural and slightly textured surface. The floor is perfect in areas that have high footfall and need impact resistance.

The floor is available in stylish EPI colours.
